Education

Dr. B R Ambedkar National Institute of Technology Jalandhar – Jalandhar, India

Master of Technology in Computer Science and Engineering, Aug 2023 – Jun 2025, CGPA: 8.18/10.0

Kashi Institute of Technology – Varanasi, India

Bachelor of Technology in Computer Science and Engineering, Nov 2020 – Jun 2023, CGPA: 7.78/10.0

Key Skills

Programming Languages: Java, Go, Python, C/C++

Databases: PostgreSQL, MySQL, Microsoft SQL Server

Backend & APIs: REST APIs, Microservices, Distributed Systems

AI & LLM: LangGraph, LLM Integration, Agentic AI Systems

Cloud & Infrastructure: Linux, Docker, Kubernetes, NGINX, AWS

Development Tools: Git, GitHub Actions, CI/CD, Maven, Shell Scripting

Core CS: Data Structures & Algorithms, Object-Oriented Design, System Design

Professional Experience

Software Engineer II, Dell Technologies – Bangalore, India (Jul 2025 – Present)

- Developed and delivered 6+ production-grade REST APIs and backend services in Go for cluster provisioning, validation, and network configuration within Dell's APEX Cloud Platform for Nutanix, owning features from design and implementation to deployment.
- Implemented 10+ validators for a Python-based post-deployment cluster lifecycle validation framework (node scaling, upgrades, and configuration changes), reducing upgrade failures across the platform.
- Wrote unit tests for Go microservices using Go's testing package and GoMock to validate business logic and mock dependencies, enabling automated test execution in GitHub Actions CI/CD pipelines to strengthen release confidence.
- Configured NGINX routing for internal and external service communication and integrated backend microservices with Nutanix Prism APIs to automate cluster node provisioning, configuration, and decommissioning.

Graduate Intern, Dell Technologies – Bangalore, India (Jul 2024 – May 2025)

- Developed Spring Boot microservices and configured NGINX as a reverse proxy with mTLS, enforcing certificate-based authentication for secure inter-service communication.
- Containerized and deployed microservices on Docker and Kubernetes, running validation tests for deployment, connectivity, and operational reliability of cloud-native services.

Software Developer – Trainee, Acxiom Consulting Pvt. Ltd. – Noida, India (Feb 2023 – Aug 2023)

- Developed business logic for a jewelry retail ERP in Microsoft Dynamics 365, including payment validation, cross-store cash-limit enforcement per customer, and category-wise offer/discount calculation with supporting UI handlers.
- Wrote and optimized SQL queries and stored procedures in SQL Server, reducing the execution time of a large customer-detail lookup query.

Relevant Projects

SpendClan – AI-Powered Personal & Group Expense Management (Next.js, PostgreSQL, Gemini, pgvector)

- Built a full-stack collaborative finance platform with a secure multi-tenant architecture, session-scoped data isolation, and NextAuth.js (JWT)-based authentication for user and group financial records.
- Integrated a Google Gemini-powered financial assistant with a RAG pipeline for spending insights and semantic search, and engineered a greedy debt-settlement algorithm minimizing transactions to settle group expenses.

TeleMock – Distributed Telemetry Processing Platform (Java, Spring Boot, Python, React, NGINX, Docker)

- Designed and developed a distributed telemetry platform using Spring Boot microservices and Python telemetry agents to securely collect, aggregate, process, and visualize infrastructure metrics from multiple machines.
- Configured NGINX with certificate-based mutual TLS (mTLS) to secure service communication, built a React monitoring dashboard, and containerized backend services using Docker for reproducible deployments.

Agentic AI Framework for DISA STIG Hardening (Python, LangGraph, Streamlit, Pandas, Matplotlib)

- Built an agentic automation framework using LangGraph to orchestrate compliance validation, remediation, and execution-failure recovery agents for DISA STIG hardening workflows.
- Implemented verify-by-rescan validation, automated retries, compliance drift detection, and evidence generation to improve audit readiness and reduce manual test effort.

Achievements & Publications

- **Publication:** "Optimizing EEG-based Harmful Brain Activity Classification via Ensemble Deep Learning and Two-Stage Training," Artificial Intelligence and Sustainable Innovation, CRC Press (2026). doi.org/10.1201/9781003731689-74
- **GATE CS/IT Qualified** – 2022 and 2023.
- **Smart India Hackathon (SIH) 2022** – Qualified for the national-level round.
- **Coding** – 500+ DSA problems solved across LeetCode, GeeksforGeeks, and HackerRank. codolio.com/profile/shashisa
